

CB247 Marketing Dashboard

Google Ads API — Design Document

Company	ChasingBetter247 Pty Ltd
Location	Perth, Western Australia
MCC Account	569-719-3495
Tool Name	CB247 Marketing Performance Dashboard
Tool Type	Internal read-only reporting dashboard
Contact	cb_agent@chasingbetter.com.au
Website	https://www.chasingbetter247.com.au/
Date	June 2026

1. Purpose

CB247 Marketing Performance Dashboard is an internal-only tool that consolidates Google Ads data alongside Google Analytics 4, Google Search Console, and Meta Ads into a single weekly view for the marketing team and management. The Google Ads API provides read-only access to campaign performance, search terms, Quality Scores, conversion action audits, and auction insights for weekly campaign optimisation decisions.

2. Architecture

Backend	Python 3.13 scripts running on a Mac mini in the CB247 office
Storage	Local JSON files (state/*.json) — no cloud database
Frontend	Static HTML dashboard hosted on GitHub Pages (private repository)
Schedule	Weekly cron job at Monday 10:00 AM Perth time (AWST / UTC+8)
Authentication	OAuth 2.0 via Google Cloud Console (cb_agent@chasingbetter.com.au)

MCC structure: Two production accounts under MCC 569-719-3495:

- Malaga (Customer ID: 937-134-0150)
- Ellenbrook (Customer ID: 821-783-6998)

3. API Usage

All queries are **read-only** (GoogleAdsService.search). No mutations, no campaign edits, no ad creation. The system pulls the following resources weekly:

Resource	Purpose	Frequency
----------	---------	-----------

campaign	Campaign-level spend, clicks, impressions, conversions, CTR, CPC	Weekly per account
search_term_view	Search terms triggering ads — negative-keyword identification	Weekly per account
keyword_view	Keyword performance + Quality Score components (CTR, ad relevance, LP experience)	Weekly per account
conversion_action (segmented)	Conversion action firing audit — verify tracking is intact	Weekly per account
auction_insight_view	Competitor impression share and outranking share	Weekly per account

Estimated total operations per weekly pull: **4,000–8,000** across both accounts.

4. Users and Access

The tool is **internal-only**. No external party or client has access.

- Marketing team: 3–5 people (Brand Manager, Web Dev, Paid Media specialist, Content team)
- Management: 1–2 people (Director-level review of weekly KPIs)

Access is controlled via GitHub Pages access list. No third-party developer or external contractor has access to the Google Ads API token or the dashboard.

5. Data Handling

- All data remains within CB247's own infrastructure (local files + private GitHub Pages site)
- No data is shared with third parties
- No data is resold or used for any purpose other than CB247's own marketing optimisation
- Tokens and credentials are stored in .env files outside the public repository (in .gitignore)

6. Compliance

- Read-only API usage (no mutate operations)
- OAuth 2.0 standard authentication flow
- No App Conversion Tracking or Remarketing API used
- Single developer token shared across two production accounts under one MCC

7. Why Standard Access Is Required

Basic Access (15,000 operations per day) is exhausted during a single weekly Monday pull when querying search_term_view and keyword_view across both production accounts with 16+ active campaigns. This causes incomplete data on the dashboard and forces partial pulls. Standard Access (40 million operations per day) provides comfortable headroom for the weekly pull plus occasional manual refreshes during the week.
